

## Independent Fork Positioner

Independent Fork Positioners - A fork positioner is actually an apparatus made out of high quality materials designed to be able to endure the most challenging procedures and work environments. This piece of equipment can enable the individual driving to be able to maneuver the forks hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the entire load or the arms so as to facilitate more precise lifting and placement in a faster and more effective method.

The fork pocket is rather unique and could enable the one operating it to be able to safely sway the forks into position without any worry of damaging the positioning cylinders. This can allow the driver the alternative to be able to execute independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into blade positioners on existing units.
