

Toyota Forklift Part

Toyota Forklift Part - Since 1992, Toyota Material Handling inc., U.S.A., often known as TMHU, have been the top selling lift truck dealer in the United States. This business has been based out of Irvine, California for well over 40 years, providing a comprehensive line of quality lift trucks. With a first-rate reputation of resilience and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the foundation of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S.A are built here.

All Toyota's manufacturing plants within Canada and the United States comply with the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its dedication to continual improvement and its environmentally friendly systems. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. To illustrate, the Toyota 8-Series IC lift trucks emit 70% fewer smog forming emissions than the existing centralized EPA standards and have complied with California's strict emission standards and policies.

TMHU, U.S.A. - Leading the Industry

Brett Wood, President of TMHU, links Toyota's achievement to its strong dedication to fabricating the best quality lift trucks at the same time as delivering the utmost client service and assistance. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also called TICO, is listed in Fortune Magazine as the world's largest lift truck dealer and is amongst the magazines celebrated World's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota's parent company, Toyota Industries Corporation, has imparted an exceptional company ideology towards environmental stewardship within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability cannot be matched by other corporations and undoubtedly no other materials handling manufacturer can thus far rival Toyota. Environmental responsibility is an important aspect of corporate decision making at Toyota and they are proud to be the first and only producer to provide UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet one more reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission standards, and also meets California's more involved 2010 emission standards. The finished invention is a lift truck that creates 70% fewer smog forming emissions than the current Federal standards allow.

What's more in 2006, Toyota established an affiliation with the Arbor Day Foundation, furthering their obligation to the environment. In excess of 57,000 trees have been planted in regional parks and national forests damaged by natural causes such as fires, as a product of this partnership. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's network of sellers to non-profit organizations and neighborhood customers to help sustain communities all over the United States

Toyota's lift vehicles offer enhanced strength, visibility, efficiency, ergonomics, and all the foremost safety technology that has made Toyota an industry leader. The company's System of Active Stability, also called "SAS", helps lessen the chance of mishaps and injuries, and increasing productivity levels while minimizing the likelihood of product and equipment breakage.

System Active Stability can sense factors that might lead to lateral instability and likely lateral overturn. When one of these conditions have been sensed, the SAS will instantaneously engage the Swing Lock Cylinder to re-stabilize the rear axle. This transitions the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to prevent injuries or accidents while adding durability.

SAS was initially launched to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS continues to be built-in to nearly all of Toyota's internal combustion machines. It is standard equipment on the latest 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with compulsory operator education, overturn fatalities across all designs have decreased by 13.6% since 1999. Also, there have been an overall 35.5% reduction in industry wide collisions, loss of control, falls and tip overs from a lift truck for the same period.

Toyota's rigid principles extend far beyond the technology itself. The company believes in providing widespread Operator Safety Training services to help customers meet and exceed OSHA standard 1910.178. Training courses, videos and an assortment of resources, covering a wide scope of subjects-from personal safety, to OSHA policies, to surface and load conditions, are accessible through the seller network.

Ever since the sale of its first lift vehicle in the U.S. to the fabrication of its 350,000th lift vehicle produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has continued a solid presence in the U.S. This reality is demonstrated by the statistic that 99% of Toyota lift trucks sold in America now are manufactured in the United States.

TMHU is situated in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of land.

Facilities include a National Customer Center, as well as manufacturing operations and supply centers for equipment and service parts, with the entire commitment exceeding \$113 million dollars.

The new NCC was built to function for TMHU buyers and sellers. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live product demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its creator, Sakichi Toyoda, in 1867, and lastly a training center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations throughout the United States, offering the most comprehensive and inclusive client support and customer service in the industry. The company's new and Certified Used lift vehicles, service, components, and financing capabilities make Toyota dealerships a one-stop shop to guarantee total client satisfaction.
