The U.S. lift Truck division based in Cleveland has a skilled team knowledgeable in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's original domestic forklift marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. begun to import assembled forklifts as part of a nationwide equipment expansion venture. Early product sales of this industrial equipment focused on large business communities, the armed forces and on state-run corporations. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education became the new focus for enhancing quality and product development.

Home-based forklift business for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a position of significant growth of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the very competitive North American materials handling market. This project proved highly lucrative for Daewoo and their forklift product sales expanded greatly. In 1984, the company finished development of a new facility to help in manufacturing high end value-added goods for export. In 1993, the company had a global sales system and started exporting models they had developed through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into international markets.
