

Utility Bucket

Utility Buckets - Universal Fit buckets also go by the name "slip-on-the-forks" lift truck accessory buckets. These buckets can be utilized along with any model and make of extendable reach forklift. If your unit can't be matched with a quick-tach unit, another new or used universal fit bucket can be located as an alternative. Typical universal forklift buckets attach to forks that are up to 6" wide and are 48" long. Bigger fork pockets could be ordered via an account manager upon request.

As universal fit lift truck buckets slip onto the blades directly, they stay on the equipment and are much less vulnerable to damage. These buckets are also 50% deeper than the quick-tach bucket models. This additional room makes them ideal for lifting irregular shaped loads such as backfilling behind walls, tearing off roof trash, elevating roof gravel, moving large debris piles and broken up concrete.

Quick-Tach Buckets

Quick-Tach Buckets are made for extendable-reach forklifts. They are built to allow positioning of materials way beyond the reach of a loader. A hardened beveled cutting blade on both sides and on the leading edge reinforces strength, resistance to wear and offers supreme durability. Quick-Tach lift truck buckets are augmented by scuff bars along the base of the unit which shield it from scratches.

Quick-Tach lift buckets can in many cases substitute the forks and carriage of a lift truck, which may weigh somewhere between 100-700lbs. These buckets when set up can free up more load capacity, enabling it to deal with both bigger and heavier materials. The Quick-Tach can dump materials around 1.5 feet higher because of the shorter depth of its bucket. These buckets are built in a customized fashion to be able to meet all the specs of certain makes and models of forklifts. It is vital to talk to a construction equipment specialist to be able to find the custom-made Quick-Tach bucket solution for all your needs.

Forklift bucket attachments are outstanding for ground level work on construction job sites. They are normally utilized for transferring snow in northern parts, and sand and gravel loading. Jobsite clean-up is another function the lift truck bucket does well. The many applications the bucket could do saves the business much time and money for the reason that it does have to absolutely switch tools or machines and this can help avoid running into overtime.
